

V I O R A *Life*

I couldn't believe how fast my treatments were or how comfortable. This was a great experience. I didn't have to diet at all, and I still went down a pant size.

R. S., 56 YO

POPULAR TREATMENT AREAS:

V·FORM YOUR QUESTIONS ANSWERED

• What is a V-FORM treatment?

V-FORM is a non-invasive, safe, effective device combining the use of radiofrequency (RF) energy and vacuum to provide treatments for body contouring, circumferential and cellulite reduction and body skin tightening (especially after weight lost).

• How does V-FORM work?

RF energy targets enlarged fat pockets to increase the metabolism and reduce fat cell volume, while the vacuum mechanism increases local blood circulation and lymphatic drainage. Treatments are simple and comfortable and resemble a deep tissue stimulation combined with gentle suctioning of the skin.

• What areas can be treated?

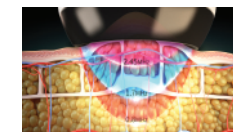

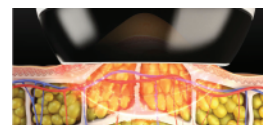

V-FORM can be used to treat those body parts you're most looking to slim down (stomach, buttocks, thighs), as well as hard-to-treat areas like underarms and inner thighs.

• How long do treatments take?

With the largest treatment applicator available, your V-FORM treatments are the fastest around. Depending upon the body part and specific treatment being done, your sessions can be between 15 – 20 minutes.

OUR TECHNOLOGY GOES DEEP

Our Vacuum Boost allows for deeper tissue penetration and increased blood circulation and lymphatic drainage.

Multi-CORE™ technology offers complete depth control across larger treatment areas for shorter treatment times.

• How many sessions are needed?

Each treatment course depends upon the body part and specific treatment being done. Recommended number of sessions for body contouring and cellulite reduction is an average of 3-8 sessions. Body skin tightening protocol may differ in total number of treatments with an average 6-12 sessions.

• Is the treatment safe?

With unprecedented safety features, V-FORM delivers safe and effective treatments.

• Is the treatment painful? Or how it feels?

Thanks to the controlled RF energy delivery the treatment is totally pain free. During the treatment you will feel a pleasant heat sensation followed by vacuum massaging. The system equipped with range of RF and vacuum levels to fit its intensity for each patient individually.

• Following a treatment when can I resume my daily activities?

V-FORM treatments are completely non-invasive with no anesthesia necessary. There is no downtime at all and following Viora's RF body treatment you can continue your usual routine directly upon leaving your treatment session.

POST-BABY, WEIGHT LOSS OR SURGERY?

If you've lost a lot of weight rapidly, via childbirth, surgery, diet, or exercise—externally you're loving your new look. But you may still have sagging or loose skin that keeps you from feeling 100% confident.

3 TREATMENTS: BODY SKIN TIGHTENING

What exactly can you do? Viora has the answer!

Now with Viora's body skin tightening protocol and CORE™ technology you can treat the extra folds and sagging skin left behind after rapid weight loss. Get your pre-baby smooth and taunt skin back!
